

powerpark.

The future of car parks is here.

PowerPark: your future solution, today.

What if you could...

- Clean up your car park with unique architecture?
- Build without losing business?
- Maximise your real estate?
- Minimise your energy costs?

With PowerPark - our innovative solar power, car-shade structure - imagination becomes a reality.

Solar power is the cleanest, greenest, and most affordable source of renewable energy available.

What can PowerPark specifically do for you? We're glad you asked.

- PowerPark absorbs and converts sunlight into sustainable energy
- This energy is wired directly to your building
- Your electrical efficiency increases – saving you money

Each year, one carspace will:

Generate 4.8 MWh
of electricity

Reduce 4.3t
of CO2

Save you
\$720

**It pays
for itself
and
much
more**

PowerPark establishes your building as unique from competitors in **eight** forward thinking ways:

1

It doubles your use of real estate.

Generating income from an otherwise underutilised source.

2

It attracts and impresses clients.

Cooler car temperatures keep customers in your establishment for extended periods of time, while your forward thinking shade structures and green credentials increase their return to your business.

Installing PowerPark opens your business up to an entirely new market - without you having to alter your brand in the slightest.

3

It's good for the environment.

PowerPark helps you minimise the overwhelming effects of heat islanding - a positive in itself - but also converts that useless heat into practical, green power.

4

It embraces the future.

The use of Electric Vehicles (EV) and solar power will only continue to rise. Installation of a PowerPark gets your business ready for battery storage and a future EV demographic.

5

It's unbelievably easy to install.

The PowerPark team's main goal is to provide a product that enables you to do what you do best. That means the combined efforts of our hard work make the installation process incredibly simple for you. (We're talking fool proof).

6

It can charge your Electric Vehicle.

PowerPark also offers installation of Electric Vehicle (EV) ChargePoints - convenient, safe and simple charging stations to impress and attract future clients.

7

It can be tailored to your specifications.

If you've got a big, small or unusual space don't stress. Flexibility is our specialty. Just shoot us some information about your site and we'll customise a PowerPark to meet those needs within a very short lead-time.

8

It's ready.

PowerPark is able to supply as soon as you like. Once you've committed to a project we'll have it at the DA stage in no time.
